FIELD'S POINT

2025 Field's Point Investigations

- 1/8/25 Pretreatment staff responded to a report stating odors were coming from a catch basin located on Carpenter Street in Providence. Unusual odors were not detected at the time of the investigation. The matter was referred to the City of Providence – Department of Public Works as the catch basin is owned by the City.
- 11/20/25 Pretreatment staff responded to a report stating odors were coming from a catch basin located on Carpenter Street in Providence. Pretreatment staff were able to detect unusual odors coming from the catch basin in question. The matter was referred to the City of Providence – Department of Public Works as the catch basin is owned by the City.

INVESTIGATIONS***

BUCKLIN POINT

2025 Bucklin Point Investigations

- 4/10/25 Pretreatment staff responded to a report from Bucklin Point Operations staff stating there was a strong odor of gasoline in the Screen and Grit Building. Operations staff determined the odor was coming from the Blackstone Valley Interceptor (BVI). Upon arrival, Pretreatment staff did not detect any unusual odors in a sample collected from BVI or in the Screen and Grit Building. In addition, the four-gas meter did not detect anything unusual as the readings were normal.
- 4/28/25 Pretreatment staff responded to a report from Bucklin Point Operations staff stating that returned activated sludge (RAS) was bubbling up through the ground. It was determined the RAS line developed a leak at coupling. A contractor was onsite to make the repair. There was approximately 1,200 gallons of RAS that reached the surface and a storm drain in the area of the leak. There were no discharges from the storm drain as the water level in the catch basin was below the discharge pipe. Interceptor Maintenance staff collected the material and discharged it back to the headworks of the plant. None of the material reached the Seekonk River. Pretreatment staff assisted with the completion of the DEM report.
- 5/8/25 Pretreatment staff responded to a report from Interceptor Maintenance staff stating unusual odors were detected on York Avenue in Pawtucket. The environment in the sewer lines in the area was inspected using a four-gas meter. No unusual odors were detected in the sewer lines in this area. However, a sulfide odor could be detected in the air in the area of York Avenue and Benedict Street. The source of the odors could not be determined.
- 11/1/25 During the month of November 2025, the Bucklin Point Treatment Plant violated
thru its RIPDES permit for nickel. It was determined the BVI influent had elevated
12/31/25 nickel concentrations during the same time period. Pretreatment staff inspected all companies that have the potential to impact the treatment plant with nickel and discharge to the plant via BVI. One company stated it had been experiencing issues with treatment at the facility. Pretreatment and Environmental Monitoring staff developed a plan to monitor strategic manholes to attempt to track the elevated nickel concentrations back to the source. The results of the manhole monitoring showed the elevated nickel concentrations originated in the area of the company experiencing treatment issues. The company was notified and was required to conduct an investigation of its facility to find the source of the elevated metal concentrations and institute corrective measures.
- 12/18/25 During the month of December, Pretreatment staff responded to reports of odors in
thru residential neighborhoods in Pawtucket and East Providence. The reports were
12/31/25 from emails issued to the city and the NBC, the Pawtucket Department of Public Works and residents in the area. Staff drove through the areas where the complaints stemmed from. Four-gas meters were used during the investigations. At times odors could be detected but the readings on the gas meters remained normal. Pretreatment staff continues to work with Bucklin Point Operations staff to address this issue with the residents in the area.

* In 2011, several samples for Cd, Cr, Pb, and Ag had to be analyzed on equipment with higher detection limits, resulting in an increase in loadings that was not actually reflective of what was being discharged at Field's Point.

** Average monthly loading for the year substituted for months without valid mercury results.

*Total Metals = Sum of Monthly Average Metals Concentrations (Cd, Cr, Cu, Pb, Hg, Ni, Ag, Zn)

**Hexavalent Chromium is generally measured as non-detectable at the detection limit of 10 ppb

***Average monthly loading for the year substituted for months without valid mercury results.

LC 50 The effluent concentration that causes 50% mortality during the acute toxicity test duration.

A-NOEC No observable effect concentration: Highest concentration of the effluent in which 90% or more of the test animals survive.

Acute Test Continuous exposure to effluent for 48 hours

NC Not Calculated
